APPENDIX B

Public Hearing Display Boards
West Lake Corridor Project
Public Hearing Open House
Welcome!

Purpose of the Hearing
- Provide information on the Project
- Present the potential impacts and benefits of the Project
- Provide an opportunity to comment on the Draft Environmental Impact Statement (DEIS) and Section 4(f) Evaluation

Open House Process
- Sign-in & Get Handouts
- Watch Presentation
- View the Exhibits
- Review the DEIS Document
- Ask questions of the Project Team
- Comment at tonight’s public hearing by speaking to a court reporter or filling out a comment card

Comments due by February 3, 2017
Project Overview

- Connect Northwest Indiana and downtown Chicago
- Rail Based Service
- Extension of South Shore Line (SSL)

Legend:
- Proposed Station
- Commuter Rail Alternative
- IHB Alternative
- Hammond Alternative
- Existing Station
- South Shore Line
- Metra
- CTA
- Interstate

Lake Michigan
Project Purpose and Need

Purpose

• Increase transportation options for central and southern Lake County residents traveling to downtown Chicago, reduce travel time and travel costs, and promote economic development opportunities in Lake County

Project Needs

• Limited reliable transportation options for accessing downtown Chicago from the study area
  ✔ Increase transportation options for accessing downtown Chicago

• Congested roadway system connecting Northwest Indiana and downtown Chicago
  ✔ Reduce travel time to downtown Chicago

• Parking at existing transit stations is oversubscribed
  ✔ Reduce the parking burden at existing transit stations

• High costs associated with driving to downtown Chicago
  ✔ Reduce travel costs

• New transit service is a key component in achieving economic development goals of local and regional plans
  ✔ Promote economic development

NICTD

WEST LAKE CORRIDOR PROJECT
What is NEPA? What is an EIS?

The National Environmental Policy Act (NEPA) requires federal agencies to integrate environmental values into their decision making processes by considering the environmental impacts of their proposed actions and reasonable alternatives to those actions.

Environmental Impact Statement (EIS)
is a requirement of the National Environmental Policy Act (NEPA) for projects seeking Federal Action that may result in a significant effect on the quality of the Human or Natural Environment. An EIS is a tool for decision-making.

Environmental topics studied include:

- Purpose & Need
- Transportation
- Land Use & Zoning
- Socio-Economic Conditions
- Neighborhood & Community Services
- Visual & Aesthetic Considerations
- Historical & Archaeological Resources (Section 106)
- Parks and Recreation (Section 4(f))
- Natural Resources
- Water Resources
- Air Quality

- Noise & Vibration
- Energy Use
- Hazardous & Contaminated Materials
- Safety & Security
- Property Acquisitions
- Residential & Business Displacements
- Construction Impacts
- Environmental Justice
- Indirect & Cumulative Effects
- Public & Agency Input
Alternatives Evaluated in the DEIS

No Build Alternative
(includes only planned and programmed projects)

Build Alternatives
- Commuter Rail Alternative (4 Design Options)
- Indiana Harbor Belt (IHB) Alternative (4 Design Options)
- Hammond Alternative (3 Design Options)
- Maynard Junction Rail Profile Option (considered in conjunction with select Build Alternative Options)
Commuter Rail Alternative

- Approximately 9 mile route extension; 4 new stations
- Maintenance and storage facility (2 locations considered)
- Connects to South Shore Line near Hegewisch Station
• Approximately 12 mile route extension; 4 new stations
• Connects to South Shore Line near 130th St. in Chicago
• Proposed design of the IHB Alternative options are the same as the Commuter Rail Alternative south of Douglas Street in Hammond
HAMMOND ALTERNATIVE

- Approximately 8 mile route extension; 4 new stations
- Maintenance Facility in north Hammond, Layover Facility near Main St.
- Connects to SSL near Indiana-Illinois state line
Service Elements

- Parking
Stations and Facilities

North Hammond Maintenance Facility & Hammond Gateway Station
Hammond Alternative Alignment

South Hammond Maintenance & Storage Facility

South Hammond Station

Munster Ridge Road Station
Under current federal regulations, an EIS must include identification of the NEPA preferred alternative.

The No Build and Build Alternative Options were evaluated on a number of factors. This analysis led to the recommendation of the Hammond Alternative Option 2 as the NEPA Preferred Alternative.
## Service, Ridership & Costs by Build Alternative

* The Hammond Alternative Option 2 is recommended as the NEPA Preferred Alternative.
Minimal to No Impact

The following resources would experience minimal potential impacts or no impacts as a result of the Build Alternatives.

- Parking
- Land Use and Zoning
- Air Quality
- Energy
- Public Transportation
- Environmental Justice

Potential Impacts

The following resources would result in potential impacts as a result of the Build Alternatives.

= Key Potential Impact

- Socioeconomics and Economic Development
- Freight Rail
- Bicycle and Pedestrian
- Traffic
- Land Acquisitions and Displacements
- Water Resources
- Cultural Resources
- Soils, Geologic Resources, and Farmlands
- Biological Resources (Wildlife and Habitat, and Threatened and Endangered Species)
- Hazardous Materials
- Utilities
- Neighborhoods and Community Resources
- Visual
- Noise
- Vibration
### Land Acquisitions & Displacements

* "Other" may include municipal, railroad, religious institution, charitable organization, and parcels without available record.

## Mitigation

Acquisition and relocation process would be conducted in accordance with the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (49 CFR § 24). For more information, see the handout from the Federal Transit Administration titled General Acquisition & Relocation Information.*

* Also available on the project website: www.nictdwestlake.com

<td>491 sites</td>
<td>None</td>
</tr>
<tr>
<td>Hammond Alternative Options 1 &amp; 3</td>
<td>458 sites</td>
<td>None</td>
</tr>
</tbody>
</table>

### Mitigation

**Noise** impacts from train horns would be mitigated through design and use of wayside horns at grade crossings.

**Vibration** impacts would be mitigated by placing track turnout switches away from residences, installing ballast mats under the proposed switch, or utilizing pointless or spring frogs. Ballast mats and spring frogs are common techniques used in the railroad industry to minimize vibration.

---

**Wayside Horns** are stationary devices installed at grade crossings that signal an approaching train instead of horns installed on the train. This keeps the sound focused at the grade crossing.
## Cultural Resources / Section 106

<table>
<thead>
<tr>
<th>Alternatives</th>
<th>Historic Architectural and Archaeological Impacts</th>
</tr>

</tr>
<tr>
<td></td>
<td>• No archaeological impacts</td>
</tr>
</tbody>
</table>

### Mitigation

**Archival Documentation** of historic properties selected for demolition;

**Educational Materials** for public exhibition concerning the historic properties affected;

**Amend** the National Register of Historic Places (NRHP) nomination to reflect the State Street Commercial Historic District’s current condition; and

**Nomination** of a similar historic property in the vicinity of the demolished property for the NRHP
<table>
<thead>
<tr>
<th>Alternatives</th>
<th>Wetland Impacts (Acres)</th>
<th>Floodplain Impacts (Acres)</th>
</tr>
</thead>
<tbody>

<td>1.5</td>
</tr>
<tr>
<td>Hammond Alternative Options 1 &amp; 3</td>
<td>5 to 8</td>
<td>1.5</td>
</tr>
</tbody>
</table>

**Mitigation**

**Wetland** impacts would be mitigated through the replacement of lost wetland resources with created or restored wetlands. For example, credits for an existing wetland mitigation bank could be purchased.

**Floodways and Floodplains**

Permanent fill within the existing floodways/floodplains would require compensatory storage and a hydraulically sized structure to ensure that water surface levels are not raised within the stream channel or along adjacent properties.
Potential Impacts after Mitigation

Visual and Aesthetics

The track and overhead electrical contact structure would change the visual character of the Study Area. These project elements would not be much different from existing transportation or utility infrastructure. In the cases of elevated alignment and commuter rail related facilities, the visual impact would be greater.

Impacts would be minimized through context-sensitive design, but would not be completely mitigated.

Neighborhoods and Community Resources

Introduction of commuter rail service would affect the perceived or actual connectivity of neighborhoods where no rail operations currently exist. Neighborhood housing would be affected by localized changes in noise, light, and glare from adjacent commuter rail related facilities.

Mitigation includes designing facility lighting to reduce impacts from glare, reduce spillage of light onto neighboring properties and adjacent roadways, and design facilities to complement or blend with surrounding communities.
**Section 4(f) Resources**

**Section 4(f)**

Section 4(f) of the U.S. Department of Transportation (USDOT) Act of 1966 established requirements for USDOT (including the Federal Transit Administration) consideration of publicly-owned parks/recreational areas that are accessible to the general public, publicly-owned wildlife/waterfowl refuges, and publicly or privately owned historic sites of federal, state, or local significance in developing transportation projects.

</tr>
</tbody>
</table>

**Monon Trail**

The Monon Trail is a Section 4(f) resource and portions of the trail would be realigned as a result of the NEPA Preferred Alternative. However, an existing cooperative agreement between NICTD, Hammond, and Munster provides for future transportation improvements within the jointly-owned right-of-way. Because the trail was developed subsequent to the agreement, any effects on the Monon Trail are not considered a Section 4(f) “use”.
Section 4(f) de minimis uses of the NEPA Preferred Alternative

Pennsy Greenway
Use of approximately 0.30 acre of Pennsy Greenway ROW to provide supports for the guideway structure in the ROW and a permanent easement for access and maintenance. The guideway structure would be designed to allow space for the future trail development.

Realignment of approximately 350 feet of the existing Pennsy Greenway between Manor Avenue and the Monon Trail.

Erie Lackawanna
Shift approximately 0.06 mile (320 feet) of the physical Erie Lackawanna Trail between Sibley Street and Ogden Street to provide adequate separation distance between the rail and trail alignments. The trail would be relocated within the existing ROW.
Why was Hammond Alternative Option 2 selected as the NEPA Preferred Alternative?

Review and Comment: On the DEIS Evaluations

Website:
http://www.nictdwestlake.com/

Email:
project.email@nictdwestlake.com

Mailing address:
NICTD, 33 East US Highway 12,
Chesterton, IN 46304

Phone:
(219) -250-2920

Comment Period Ends Feb. 3, 2017

Next Steps: In 2017

**Summer 2017**
Final Environmental Impact Statement (FEIS) / Record of Decision (ROD)

- The FEIS will address substantive comments received during the DEIS public comment period.

- A Record of Decision (ROD) will state the Federal Transit Administration’s final decision, discuss measures to minimize and avoid impacts, and disclose the project’s mitigation commitments.

**Summer/Fall 2017**
Engineering Phase

- Engineering plans and designs will be refined and construction plans will be generated during this phase.
